REMS pressing rings 64–108 mm for Viega systems

REMS pressing ring (PR-3B) with 3 pressing formers for high quality, large dimension pressings. Optimum pressing by radially controlled movement of the pressing formers. Highly resistant pressing rings, mechanically machined from rolled special steel, specially hardened. The pressing contours of the REMS pressing rings are system-specific and correspond to the pressing contours of the respective pressfitting systems. Perfect system-conformant, reliable pressing as a result. Adaptor tongs are necessary for driving the pressing rings. Can be driven by all REMS radial presses (except REMS Mini-Press ACC) and suitable radial presses of other makes:
